**Subject:** Re: Federal Register listing of Proposed Amendments to the National Rule

Good morning Joe

Thanks for the notice. At first pass these are my comments:

1. 207.605 section only add materials that the NOP forgot the first time. It does not add any of the processing materials that the NOSB has reviewed. Why?
2. I find the comments about Ethylene strange. the use the NOP is talking about is crops so should have been 207.601 not 605.
3. In talking about the materials that the NOSB had reviewed at their meetings NOP miss a few like the March 2000 meeting California. At that meeting NOSB reviewed and approved Animal enzymes-Rennet ( animal derived); bovine liver; animal lipase; pepsin & trypsin - Calcium Sulfate & Peracetic Acid - use in wash and/or rinse water, surfaces sanitize.

Some one need to check the other meeting dates to see what else they missed.

Thanks Rod
